Shaqra University Staff's Degree of Practicing the Necessary Academic Requirements for Improving Their Performance, from their Viewpoints

Adnan Al Warthan^{*}

PhD. Assistant Professor Foundations of Education Dear of Quality Assurance and Development at Shaqra University, Saudi Arabia

Sanaa Ali Ahmed Youssef

PhD. Assistant Professor Foundations of Education, Saudi Arabia

Abstract: This study aims at pointing out Shaqra university staff's degree of practicing the necessary academic requirements needed for improving their performance in the spheres of the university academic performance. The survey-descriptive approach and the measurement approach (questionnaire) are applied to achieve the purpose of this study. The number, on which the study is applied, is 358 members of the university staff. The questionnaire is divided into three sections related to the following domains: the first section is about Shaqra university staff's practice degree in the sphere of education and learning; the second section is about Shaqra university staff's practice degree in the sphere of scientific research; the third section is about Shaqra university staff's practice degree in the sphere of community service.

Concerning Shaqra university staff's practice degree in the sphere of education and learning, the results is more than 50 % of the university staff members. From their viewpoint, they consider the degree of practicing the necessary academic requirements for improving their performance in the sphere of education and learning is good. Besides, 37.5 % of the university staff regards their practice performance as medium and low. While, in regard of the university staff's practice degree in the sphere of scientific research, less than 50 % of the university staff members consider the practice of the university staff's is good, in the light of their standpoint regarding the essential academic requirements for improving the scientific research. Moreover, 53.4 % views their practice for the advancement of their performance is medium and low. In respect of the practice degree of the university staff in the sphere of community service, 50 % of the university staff regards it as good, in the light of their viewpoint of practicing the essential academic requirements for improving their performance in the domain of the community service. Besides, 50 % of the university staff considers their participation for the improvement is medium and low. The study's result indicates that there is a firm direct correlation between the section of education and learning and the section of scientific research, in addition to that medium direct correlation between the section of scientific research and the section of community service. The research's most obvious recommendations are: establishing special strategy and criterion for improving the performance, offering training courses in this respect, and concentrating on the interaction of the section of education and learning and the section of scientific research, with the section of community service.

Keywords: Descriptive approach, Measurement approach, Questionnaire, Academic requirements, University staff, Community service, Performance.

1. This Vision can be Useful

The vision suggests improving university staff's performance in different performance areas such as (Education-Scientific research- Community service- Administrative spheres and career development) and improving university's faculties according to quality criteria and academic accreditation.

The University staff's performance is considered an important component in the academic organization, and therefore deficiency of this performance is one of the challenges faced by the university. In different universities, university staff are deemed cornerstone in the educational process, and developing tool of the university, for what they do in terms of diverse tasks regarding teaching and scientific research, as well as community service. To focus on developing their performance and coping up with the international criteria in different domains is quite essential for improvement. Performance's degree of university staff is considered a yardstick of measuring the degree of services offered by the educational institutions, apart from spreading the thought, the philosophy, and the academic

accreditation since it is regarded as an effective evaluative sample of measuring the quality of the educational institutions.

The committee of the academic accreditation in the kingdom of Saudi Arabia determines the referential frame for the academic practicing criteria of the university professor; stemmed from the best international, regional and local experiments. Such frame is regarded as a base for all high education's institutions that are supposed to advance the vocational performance of the university staff in four main domains: (education- scientific research - community service - administrative sides and vocational improvement). Since Shaqra university is an emerging one, applying such quality criteria and academic accreditation helps the university to take effective steps towards accreditation and quality guarantee, through recognizing the real performance of university staff and the educative requirements of improving their performance in the university in domains like (education- scientific research - community service - administrative sides and vocational improvement).

This takes place in the light of:

- **A-** Determining the university staff's degree of knowing and practicing knowledge and different skills that reflect performance degree of each member in the university staff.
- **B-** Degree of knowing and practicing knowledge and different skills for university staff and that show the required skills on the tangible level.

2. Improvement Levels

Levels of improving university staff's performance is according to:

- 1- Level of determining degree of available skills for university staff (questionnaire)
- 2- Level of determining the required skills on the tangible level (questionnaire).
- 3- Level of planning training courses.
- 4- Application level.
- 5- Level of evaluating improvement's process.
- 6- Level of feedback and constant supervision.

2.1. First Level: Determining the Level of University Staff's Available Skills

This will appear by knowing university staff's degree of available skills through determining university staff's level of practicing different skills. The vision is to concentrate on the skills towards which the responses are directed, in the light of two responses (medium, low) and translated in terms of training courses and workshops. This is clarified through the following level.

2.2. Second Level: Determining the Required Skills on the Tangible Level and Converting Them into Training Courses and Workshops

This will be shown through knowing the importance of diverse skills for university staff, and the vision will concentrate on the skills towards which the responses are directed, in the light of two responses (high, low) and converting them into training courses and workshops in terms of four performance's domains (education-scientific research - community service - administrative sides and vocational improvement).

2.2.1. First: Needs of Education's Domain

- 1- Modern ways in teaching.
- 2- Exams' system and students' evaluation.
- 3- Ethics and career moral.
- 4- Creative teaching.
- 5- Electronic teaching.
- 6- Self and reactive teaching.
- 7- Employing technology in teaching.
- 8- Provoking motives' skills.
- 9- Quality criteria in educational process.
- 10- Skills of academic guide and students' aid.
- 11- Thinking skills.
- 12- Communication skills.

2.2.2. Second: Needs of Scientific Research's Domain

- 1- Using SPSS data.
- 2- Modern curricula and methods in scientific research.
- 3- Writing competitive research schemes.
- 4- Writing scientific research's reports.
- 5- International publication of scientific researches.
- 6- Skills of team work and research team's management.

- 7- Ethics of scientific research.
- 8- Criteria for defining priorities of carrying out scientific researches.
- 9- Criteria of forming integral research teams.
- 10- Criteria of scientific research in the light of quality guarantee.

2.2.3. Third: Needs of Community Service's Domain

- 1- Partnership between university and community.
- 2- Methods of defining community's needs.
- 3- Participating in community development's programs.
- 4- Employing scientific researches' results in improving community researches.

2.2.4. Fourth: Needs of Administrative Sides and Vocational Improvement's Domain

- 1. University management.
- 2. Knowledge management.
- 3. Decision making and creative leadership.
- 4. Electronic administration.
- 5. Academic quality and accreditation.
- 6. Academic criteria.
- 7. Strategic planning.
- 8. Preparing executive plans.
- 9. Description of programs and curriculum.
- 10. Stating programs and curriculum.
- 11. Internal supervision's systems.
- 12. Self-evaluation and annual report.
- 13. Credit hour systems.
- 14. Time management, meetings and work pressure.

2.3. Third Level: Planning of Training Courses

1- Analysis and defining training needs

Training needs are defined as "list of changes in knowledge, directions and skills that are changed in respect of the trainee's performance with the aim of satisfying the efficient work's requirements. Besides, the training need means the gap between the effective performance, on the one hand, and the expected performance of university staff member.

- **2-** Framing training course's aims:
- **A-** Training course's general aims:
- Elevating self-competence for university staff
- Connecting university staff with their academic reality.
- Bridging the gap of knowledge and cognition between effective performance of university staff and the expected performance.
- **B-** Behavioral aims of the training course:

Terms and characteristics of the training course's behavioral aims:

- Specialized in every topic and part of the course (knowledge, skill, behavioral modification)
- Stemmed from the general goals.
- Specific and able to measurement.
- Achieved through each educational situation.
- Suitable and realistic.
- Allotted to specific period of time.
- **C-** The training content and curriculum for the training course:

The following conditions must be put into account when the training content and curriculum are defined:

- Continuation and tracing data.
- Integration between knowledge and skills.
- Combination and integration between goals and methods.
- Balance in presenting data.
- Concentration on the idea of self-learning and self-training.
- Text's explicitness and style's appropriateness.
- **D-** Defining the humane and financial abilities:
- Choosing trainers.
- Determining period of time and location of holding the course.
- Determining the training requirements (training portfolio –presentation's devices)
- Taking appropriate administrative procedures.
- Saving appropriate financial budgets.
- · Mass media.

2.4. Fourth Level: Implementation

A- Procedures:

- 1. Preparing the training portfolio.
- 2. Determining the trainers.
- 3. Determining the trainees.
- 4. Determining suitable time and place of the course.
- 5. Preparing the training requirements (presentation's devices,
- 6. Applying the training course.

B- The most important training methods and tools:

The training course can be presented in one or more methods of the following:

- 1. The training lecture: method of conveying knowledge by less cost. It allows many individuals to participate and inserts workshops.
- 2. Debates: in which ideas are exchanged in terms of a topic or a problem with an endeavor to solving it, apart from giving the trainee a chance to take part and to introduce their ideas.
- 3. Playing roles: in which one or two persons perform it and the rest of the participants are to observe what is going on.
- 4. Brainstorming: is a method for developing the creative thinking for group consisting of 10-15 persons, and the coordinator presents the problem and the ideas, afterward.
- 5. Training portfolio:is relatively a modern method that consists of one comprehensive file of the scientific subject and what the program requires. Besides, it consists of introduction, guidelines for trainees, guidelines of trainers, goals, training units, session's system, evaluation sample, some study cases or practical exercises and films.
- 6. Training workshops: are used when the participants own new experiences in workshops' field. This leads to cooperation and collective training, as well as requires high skill from the trainers.
- 7. Scientific exercises: in which learning occurs through practice, application, as well as usually normal time is determined for achieving the exercise, apart from putting into account the work of the participants solely.

Some aspects affect the choice of the training method:

Humane aspects: in which the training management, the trainer, the nature of the trainees, and their scientific background control. The training goals: are directed towards gaining skill, knowledge, or behavior modification. Training and financial aspects: include the equipment, the machines, the techniques, the hall, the budgets, and others. Fields and specialization: are limited in the sense that they are directed towards a specific category or a general one that includes board and large sectors.

2.5. The Fifth Level: Evaluation

It means the process of investigating- in a scientific and objective way- the appropriateness of the courses, the training programs that are carried out and how it is connected with the goals, and its ability to self-develop the trainees.

- **A.** The basic aspects that must be evaluated in the training courses:
 - 1. Strategy of defining the training needs of the university staff.
 - 2. Strategy of defining the training goals, and their draft.
 - 3. The efficiency of the training courses in achieving the defined goals.
 - 4. The degree of the trainee's satisfaction from the program.
 - 5. The degree of the changes in the trainee's behavior as a result of their learning and acquiring skills.
 - 6. The positive results in respect of how the tasks are achieved distinctively and efficiently.
 - 7. The efficiency degree of the applied training methods and ways' and their suitability with the training subject.
 - 8. The efficiency of the evaluating methods and their suitability with the trainees' nature.

B. The evaluating types:

- 1. Evaluating during implementation:
 - Evaluating during implementation and direct evaluation are to define the deficient sides early, to avoid them and to make sure of the participation and the trainees' interaction.
- 2. Evaluating after implementation:
 - Aims at recognizing how programs are carried out. It can be directed towards the supervisors to make sure that the trainees' knowledge and skills have actually changed as a result of this program.
- **C.** Methods and ways of evaluating the training's results:
 - 1. Knowing the trainees' reaction:
 - This happens through questionnaire during and after the program to know the participants' reactions and opinions regarding the program.
 - 2. Field evaluation for the trainees:

This evaluation happens after the training so as to know the effect of the training and this is the most expressive way used to know how effective the training is.

3. Direct observation:

This happens through the observation of the colleagues, the head of departments, and deans after the training's operations.

2.6. Sixth Level: Feedback and Constant Follow-Up

Feedback means the process through which the trainer recognizes the results of his work and how the trainees' respond to it, as well as the information that the trainee's receive after the performance as it helps them know how much they master the task they achieved.

- A. Feedback's conditions:
 - 1- To be characterized with continuity.
 - 2- To take place in the light of obvious goals.
- 3- Its interpretation requires deep comprehension and profound scientific analysis.
- 4- Including all the elements of the training process.

A vision for improving the performance in different colleges at university

Establishing several developing units that pave the way for accuracy and mastering the academic work in different faculties at the university:

- 1- Statistics unit
- 2- Graduates unit
- 3- Crisis and disaster unit
- 4- Information technology unit

Each unit in the faculty has its vision and goals, and looks forward to achieve them. It is chaired by a coordinator who forms different committees that seek achieving their goals.

3. Results of the Research Questionnaire's Analysis Entitled

The university staff's practice degree of the essential academic requirements for improving their performances in academic performance's fields

This questionnaire is applied on a sample consisting of 358 university staff members and is divided into three different facets; discussed as follows:

3.1. First Facet: - (Degree of University Staff's Practice in the Field of Education and Learning)

The first facet of the questionnaire compromises of 40 different items whose analysis reveals that:

General average for the facet's items is 47, 2 out of 4 and the standard deviation 0.33. It reveals that the arithmetic mean for all the facet's items falls between (1.95) & (2.78) out of (3); this reflects the fact that most of the responses regarding practicing the items falls between medium and high. From their viewpoints, any university staff's practice of the essential academic requirements for improving their performances in the education and learning field were good. Results of the standard deviation differ as it rises above 50 %. It is noticed that the items (27 & 30 & 31 & 38) exceed (0.8) and the items (15 & 26 & 28) exceed (0.7) and the items (7 & 12 & 14 & 15 & 16 & 21 & 24 & 25 & 29 & 32 & 39) have exceeded (0.6) which reflects the fact that there are incomplete comprehension of the item's content or that presenting the items should be done in a different way.

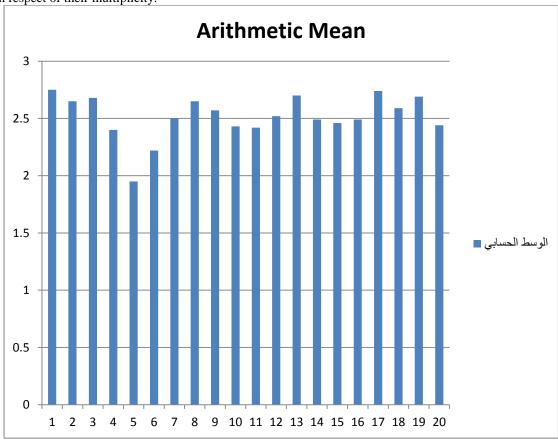

It is revealed that the number of the items of which the percentage of the responses exceed by —the number- (3 high) 50% of the individual sample reach 25 items out of total 40 items by 62.5 %. This reflects that in 37.5 % items, the degree of university staff's practice of the essential academic requirements for improving their performances in education and learning's field is medium and low. Such percentage is so far high comparing to the community sample of university staff.

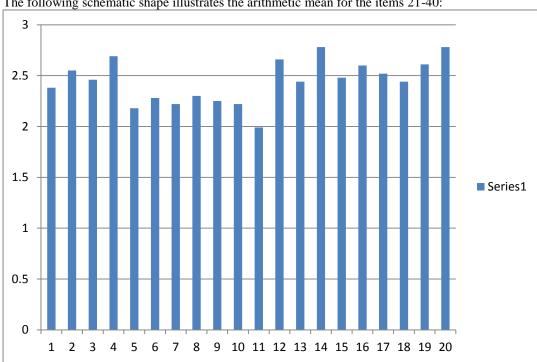

The following table shows the findings of the statistic analysis's results for the first facet's items:

Item's number	Arithmetic mean	Mode	Standard deviation
1	2.75	3	0.434
2	2.65	3	0.478
3	2.68	3	0.523
4	2.4	2	0.569
5	1.95	2	0.783
6	2.22	2	0.342
7	2.5	3	0.634
8	2.65	3	0.50
9	2.57	3	0.549

38 2.44 3 0.810 39 2.61 3 0.638	36	2.6		0.490
39 2.61 3 0.638	37	2.52	3	0.50
	38	2.44	3	0.810
40 2.78 3 0.638	39	2.61		0.638
	40	2.78	3	0.638

Here is a schematic shape that illustrates the arithmetic mean for the items (1-20) as items are drawn into two shapes in respect of their multiplicity.

The following schematic shape illustrates the arithmetic mean for the items 21-40:

3.2. The Second Facet: Shaqra University Staff's Practice Degree in the Field of Scientific Research

The second facet of the questionnaire contains 15 different items that reveal upon analysis that:

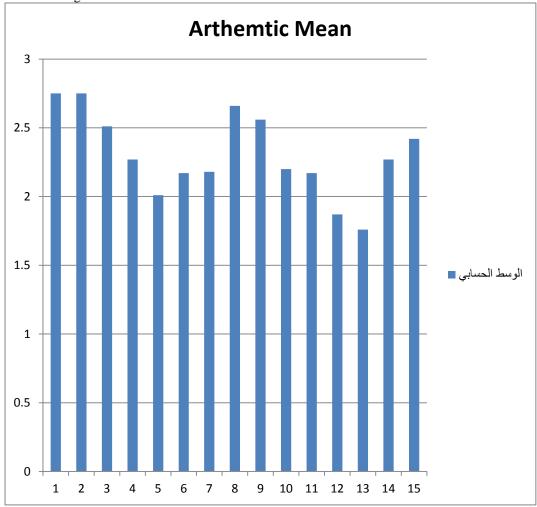

The general average of the facet's items is 2.3 out of 3, the standard deviation is 0.43, and the arithmetic mean for all the facet's items falls between (1.76) & (2.75) out of (3) which reflects that fact that most of the answers for practicing the item take a medium and a high degree. That is to say, university staff's practicing of the essential academic requirements for improving their performances in scientific research is good, from their viewpoint.

The results of the standard deviation differ according to its highness than 50 % as it is noticed that the items (6 & 10 & 11 & 12 & 13 & 15) transcend (0.8), the items (5 & 14) transcends (0.7), and the items (4 & 7 & 8) transcend (0.6) which reveals that there is not complete comprehension of the items' content caused by the sample's individuals or that the items should have been introduced in a different way.

The number of the items whose answers' percentage exceeds (3 high) number 50 % of the sample's individuals reaches 7 items -with the percentage 46.6 %- out of 15 items- the total. This reflects that 53.4 % of the items in which the university staff's practice degree of the essential academic requirements for improving their performance in the field of education and learning are medium and low. It is a big percentage among the sample's community of university staff.

The following chart illustrates the statistical analysis' results of the second facet's items:

Standard Deviation	Pattern	Arithmetic mean	Items' number
0.55	3	2.75	1
0.502	3	2.75	2
0.574	3	2.51	3
0.636	2	2.27	4
0.756	2	2.01	5
0.830	3	2.17	6
0.673	2	2.18	7
0.631	3	2.66	8
0.599	3	2.56	9
0.897	3	2.20	10
0.833	3	2.17	11
0.840	1	1.87	12
0.814	1	1.76	13
0.795	3	2.27	14
0.822	3	2.42	15

The following chart clarifies the distribution of the arithmetic mean for each item of the second facet's items:

3.3. Third Facet: (Degree of University Staff's Practicing in the Field of Service Community)

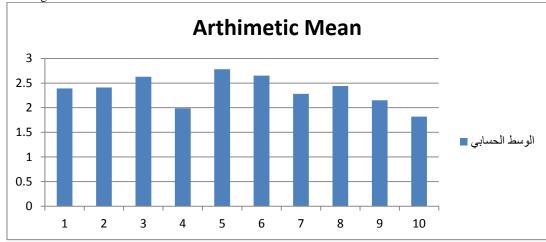

The third facet compromises 10 different items that reveal upon analysis:

The general average of the facet's items is 2.35 out of 3 and the standard deviation is 0.39. It is shown that the arithmetic mean for all the facet's items falls between (1.82) & (2.78) out of (3) which reflects that most of the answers for practicing the item are medium and high degree. That is to say, university staff's practicing the essential academic requirements for improving their performances in the field of education and learning is good, from their viewpoint. The results of the standard deviation differ in terms of its highness more than 50%. It is noticed that the items (9&10) exceed (0.8), the items (2 & 4& 7) exceed (0.7), and the items (1 & 3 & 8) exceed (0.6). This reflects that there is not complete comprehension of the content of the questionnaire's item by the sample's individuals.

The number of the items whose answer's percentage exceeds the number (3 high) 50 % out of the sample's individuals, reaches 5 items out of 10 items by the percentage 50%. This reflects that 50 % of the items in which the university staff's practice degree of the academic requirements essential for improving their performances in the field of service community are medium and low; it is a big percentage among the samples' community of university staff.

The following chart illustrates the statistical analysis' results of the of the third facet's items:

Standard Deviation	Pattern	Arithmetic Mean	Item's number
0.616	2	2.39	1
0.70	3	2.41	2
0.664	3	2.63	3
0.799	2	1.99	4
0.411	3	2.78	5
0.592	3	2.65	6
0.748	3	2.28	7
0.644	3	2.44	8
0.814	3	2.15	9
0.908	1	1.82	10

The following chart clarifies the distribution of the arithmetic mean of each item of the third facet's items:

Upon studying the relation between the questionnaire's facets, it is shown that there is a direct corelation between the facet of education and learning and of the facet of scientific research. Pearson Correlation Coefficient reaches (0.84). In addition, it indicates that there is a direct correlation between the facet of scientific research and the facet of community service in which Pearson Correlation Coefficient reaches (0.63) & (the facet of scientific research and the facet of community service) in which Pearson Correlation Coefficient reaches (0.64). This reflects the necessity of taking into account the interreaction of both the facet of education and learning and the facet of scientific research with community service.

The following chart illustrates Pearson Correlation Coefficient among the questionnaire's facets:

Third Facet	Second Facet	First Facet	
	0.841		First Facet
0.637			Second Facet
		0.644	Third Facet

Ouestionnaire

Honorable/ university staff member...... Respectable

May Peace Mercy and Blessing of ALLAH be bestowed upon you ..and thereafter,

In respect of the university's journey towards vocational progress of the university staff, and towards defining the academic requirements for improving their performances in the university regarding the field of academic performance (education – scientific research – community service), the two researchers do a research entitled:

The University Staff's degree of practicing the necessary academic requirements for improving their performances, from their viewpoints.

Please, objectively answer the questionnaire's items so as to reach real results. Knowing that such information is for the sake of the scientific research's field and for the academic improvement of the university staff, it compromises of the following facets:

- 1- First facet: university staff's practice degree in the field of education and learning.
- 2- Second facet: university staff's practice degree in the field of scientific research.
- 3- Third facet: university staff's practice degree in the field of community service.

Put the sign ($\sqrt{}$) on each item of the questionnaire's items - after thoroughly reading- in the column you see suitable from your standpoint. There are three levels for the questionnaire (high = 3) (medium = 2) (low = 1). Be sure that those presented opinions and responses will be used for nothing but the purposes of scientific research through this research.

My very thanks and appreciation for your sincere practical contribution

Please send the questionnaire- after filling- to any of the two researchers as whether hard copy or soft copy.

First Facet: university staff's practice degree of the academic requirements essential for improving their performances in the field of education and learning:

Term	Item	Practice Degree		
		High	Medium	Low
1	Coping up with and applying the most modern trends in the specialty's topic.			
2	Arranging the logical sequence of the curriculum's content and connecting its parts			

	during the teaching process		
3	Putting into account the individual differences		
	among the learners.		
4	Setting up a teaching plan in the light of		
	students' needs.		
5	Setting up a long-term plan for different		
	education and learning activities.		
6	Setting up a short-term plan for different		
_	education and learning activities.		
7	Planning for using diverse learning strategies		
8	Defining suitable learning methods for		
	specialty. (Applying strategies and suitable		
-	modern teaching methods for specialty)		
9	Applying different education methods in terms		
10	of the educational situation.		
10	Modifying strategies and teaching methods in		
1.1	the light of feedbacks.		
11	Employing modern technology in building the educational material.		
12	Arousing the students' interest s in education		
12	by all possible means.		
13	Diversification in using the suitable		
13	educational methods		
14	Investing different learning sources in terms of		
1.	the curriculum's parts.		
15	Employing educational activities efficiently in		
13	serving the curriculum.		
16	Employing modern educational technology in		
10	academic activities.		
17	Vocational treating the students according to		
	their different characters.		
18	Arousing students' interest for learning.		
19	Managing available time to achieve its		
	effectively.		
20	Building evaluating tools appropriate for the		
	desired learning results.		
21	Guiding the students to use self-evaluation.		
22	Providing the students with feedbacks		
	according to constant evaluation's results.		
23	Using enriching methods for improving		
	students' performances in the light of the		
	evaluation's results.		
24	Applying skills for designing academic		
25	programs.		
25	Applying education-quality definitions in the		
26	academic process.		
26	Participation in planning for the academic		
27	guidance for the students in the department.		
27	Activating and practicing the academic guidance for the students in the department.		
28	Participation in activating the students'		
20	activities.		
29	Employing structural-evaluation (formational)		
2)	process during teaching.		
30	Developing high thinking skills among		
50	students.		
31	Using diverse statistical methods for data		
3.	analysis.		
32	Managing the educational situation in a good		
	way.		
33	Employing effective communication skills in		
	the educational process.		

34	Ability to make decision and solve problems.		
35	Helping the learner to gain self-learning skills.		
36	Enriching and developing curricula.		
37	Setting collective exams according to specification's schedule.		
38	Using diverse methods in evaluating and supervising learning.		
39	Preparing curriculum's description according to the national body's model.		
40	Consistency and agreement between the scientific content of curriculum and the study plan of the program.		

Second Facet: university staff's practice degree of the academic requirements essential for improving their performances in the field of scientific research:

Term	Item	Practice Degr	Practice Degree		
		High	Medium	Low	
1	Knowing the methodology and methods of the scientific research.				
2	Evaluating different research sources in a scientific way.				
3	Carrying out researches in the field of specialization.				
4	Participation in carrying out innovative scientific researches in the in-between specializations related to their majors.				
5	Employing research results' in improving the educational process.				
6	Taking part in seminars and conferences in the field of specialty.				
7	Making use of seminars and conferences in the field of improving the educational process.				
8	Sticking to the ethics and morals of the scientific research.				
9	Ability to work within research teamwork.				
10	Ability to manage research teamwork.				
11	Providing database about the scientific fields in the major.				
12	Taking part in research projects funded by the university.				
13	Taking part in research projects funded from outside the university.				
14	Publish researches in specialized journals on the local level.				
15	Publish researches in specialized journals on the international level.				

Third Facet: university staff's practice degree of the academic requirements essential for improving their performances in the field of community research:

Term	Item	Practice Degree		
		High	Medium	Low
1	Introducing realistic ideas for improving society.			
2	Participating in solving societal problems.			
3	Participating in developing-society programs.			
4	Investing the scientific researches' results in improving			
	society institutions.			
5	Respecting prevalent morals in society.			
6	Introducing good example for society.			
7	Making use of the existed facilities in society in a way			
	that serves the educational process.			

8	Participating in the local society; in celebrations of		
	national and religious occasions		
9	Participating in associations and institutions' activities		
	inside the society.		
10	Contribution in supporting and funding scientific		
	activities for community service.
